Computer Communications 26 (2003) 2113–2132

computer communications

www.elsevier.com/locate/comcom

Subject Index of Volume 26

802.11
Modeling and simulation of IEEE 802.11 WLAN mobile ad hoc networks using topology broadcast reverse-path forwarding (TBRPF) 1741

Academic institution
Development of the communication/information infrastructure at the academic institution 472

Academic ISP
The implementation of broadband network technologies in CARNet 465

Academic networking
Development of the communication/information infrastructure at the academic institution 472

Accounting
A market managed multi-service Internet (M3I) 404
Accounting and pricing: a forecast of the scenario of the next generation Internet 2037

Active queue management
Service differentiation and performance of weighted window-based congestion control and packet marking algorithms in ECN networks 314

Activity-centric context
Activities, context and ubiquitous computing 1168

Ad hoc network
Congestion control multicast in wireless ad hoc networks 278
Selecting a routing strategy for your ad hoc network 723
Optimizing the packet forwarding throughput of multi-hop wireless chain networks 1515

Ad hoc networks
Addressing the requirements of QoS management for wireless ad hoc networks 1263
On the use of out-of-band signaling in ad hoc wireless networks 1405

Ad hoc stub network
Charging support for ad hoc stub networks 1504

adaptive applications
Dynamic class selection and class provisioning in proportional differentiated services 204

Adaptive
A novel dynamic cache size adjustment approach for better data retrieval performance over the internet 1710

Adaptive properties
Exploiting the adaptive properties of a probing device for TCP in heterogenous networks 177

Adaptive routing
Optical burst switching protocols for supporting QoS and adaptive routing 1804

Ad-hex networking
Philosophies and technologies for ambient aware devices in wearable computing grids 1145

Admission control
On the effectiveness of the many-sources asymptotic for admission control 1376
Optimal setup of interference threshold in a multi-cell WCDMA environment 1415
A market managed multi-service Internet (M3I) 404
ACES: An efficient admission control scheme for QoS-aware web servers 1581

Admission control algorithm
A framework for providing differentiated QoS guarantees in IP-based network 327

Admission control based on estimation of service time
ACES: An efficient admission control scheme for QoS-aware web servers 1581

Agents
AdoCSI: towards a transfparent mechanism for disseminating Certificate Status Information 1851

Air interfaces
Spectrum issues and new air interfaces 53

All-optical
Performance evaluation of multirate time division multiplexed wavelength routed optical networks 1644

Ambient aware devices
Philosophies and technologies for ambient aware devices in wearable computing grids 1145

Analytical model
Optimal location management for two-tier PCS networks 1047

Anycast routing
On anycast routing with bandwidth constraint 1541

Application level performance
Observed performance of elastic Internet applications 914

Application proxy
Reactive firewalls—a new technique 1302

Approximation Algorithm
Hierarchical Reliable Multicast: Performance Analysis and Optimal Placement of Proxies 2070

Architecture
A market managed multi-service Internet (M3I) 404

ARNet
The role and strategy of an ARNet in a developing country 460

Assured service
The two markers system for TCP and UDP flows in a differentiated services network 338

doi: 10.1016/S0140-3664(03)00262-7

A service model for guaranteeing packet loss bounds in differentiated services architectures 1083

Asynchronous transfer mode
VIRUS: a pseudo-framing method for cell-based interfaces 165
Interactive video over ATM: state of the art 747
A proposal of new price-based Call Admission Control rules for Guaranteed Performance services multiplexed with Best Effort traffic 1470
A distributed simulator for network resource management investigation 1782

Asynchronous transfer mode networks
A measurement-based call admission control scheme for ATM networks based on the diffusion approximation 622

ATM broadband network
Statistical transmission delay guarantee for nonreal-time traffic multiplexed with real-time traffic 1365

ATM
Design of new real-time models for tight upper bound approximation of cell loss ratio in ATM networks 1225

ATM networks
A delay optimal algorithm to locate and migrate data resources in broadband networks 103

Attribute certificates
Using a privilege management infrastructure for secure web-based e-health applications 1863

Automated Network Management
A new traffic engineering manager for DiffServ/MPLS networks: design and implementation on an IP QoS Testbed 388

Backup path
Lambda GLSP setup with QoS requirements in optical Internet 603

Bandwidth allocation
A bandwidth allocation model for a two-pass RSVP setup mechanism 1662
Predictive and measurement-based dynamic resource management and QoS control for videos 1651
Low cost pre-stored video transmission across networks 2061

Bandwidth coupling delay computation
End-to-end QoS routing framework for differentiated services networks 566

Bandwidth–delay decoupling
Call admission control in generalized processor sharing schedulers with tight deterministic delay bounds 65

Bandwidth smoothing
Online variable-bit-rate video traffic smoothing 639

Bank communications systems
A framework for the design of bank communications systems 1775
A framework for the design of bank communications systems 1775

Base station
Design and control of the interconnecting network of the access segment of mobile communications systems 489
Challenges of computing in mobile cellular environment—a survey 2090

Base station controller
Design and control of the interconnecting network of the access segment of mobile communications systems 489

Bayesian networks
Using Bayesian network on network tomography 155

Beamforming
Smart antennas for wireless communications beyond the third generation 41

Best Effort services
A proposal of new price-based Call Admission Control rules for Guaranteed Performance services multiplexed with Best Effort traffic 1470

Bilateral protocols
Resource reservation with a market-based protocol: what prices to expect? 1434

Blind and visually impaired users
Homer II—man–machine interface to internet for blind and visually impaired people 438

Blocking probabilities
Performance modeling of wireless networks with generally distributed handoff interarrival times 1747

Blocking probability
Optimal wavelength converter placement in arbitrary topology wavelength-routed networks 975

Border Gateway Protocol
Characterizing and reducing route oscillations in the Internet 143

Bounded flooding technique
QMBF: a QoS-aware multicast routing protocol 611

Bounded response time
ACES: An efficient admission control scheme for QoS-aware web servers 1581

Bounded update time
A pipelined routing lookup scheme with fast updates 1594

Broadband access technology
Operation management of IP broadband access networks 679

broadband access
Pragmatic modeling of broadband access traffic 804

Broadband wireless access
A traffic scheduling framework in broadband wireless access systems 1602

Broadcast
Cost-effective broadcast for fully decentralized peer-to-peer networks 1159
Reduction of the broadcast redundancy by location awareness in mobile ad hoc networks 2082

Broadcast communication systems
Performance evaluation of a new multiaccess protocol for local area networks 1800

Broadcast medium window
Congestion control multicast in wireless ad hoc networks 278

Brownian bridge approximation
Connection admission control in UMTS radio access networks 2011

Buffer management
DRA: a new buffer management scheme for wireless atm networks using aggregative large deviation principle 708

A service model for guaranteeing packet loss bounds in differentiated services architectures 1083
Bursty traffic
The impact of bursty traffic on FPCF packet switch performance 513
Performance evaluation of a new multiaccess protocol for local area networks 1800
Business model
Charging support for ad hoc stub networks 1504
Business Models
Service architectures for the wireless world 19

C++
Performance comparison of dynamic web platforms 888
Cache size adjustment
A novel dynamic cache size adjustment approach for better data retrieval performance over the internet 1709
Call admission control
Call admission control in generalized processor sharing schedulers with tight deterministic delay bounds 65
Call admission control for wireless personal communications 522
A service model for guaranteeing packet loss bounds in differentiated services architectures 1083
QoS-sensitive admission policy for non-real-time data packets in voice/data integrated CDMA systems 1419
Adaptive call admission control for QoS provisioning in multimedia wireless networks 1560
Predictive and measurement-based dynamic resource management and QoS control for videos 1651
Call Admission Control
A proposal of new price-based Call Admission Control rules for Guaranteed Performance services multiplexed with Best Effort traffic 1470
Call-to-mobility ratio
Dynamic location strategy for hot mobile subscribers in personal communications 1353
Capacity
Non-blocking OVSF codes and enhancing network capacity for 3G wireless and beyond systems 1907
Capacity and flow assignment
Discrete capacity and flow assignment algorithms with performance guarantee 1056
Capacity flow assignment
A genetic algorithm based approach to route selection and capacity flow assignment 961
Capacity management
Congestion control, differentiated services, and efficient capacity management through a novel pricing strategy 1457
Capture probability
The effect of spreading gain control on a CDMA slotted ALOHA system° 996
CARNet
The role and strategy of an ARNet in a developing country 460
CDMA
DRA: a new buffer management scheme for wireless atm networks using aggregative large deviation principle 708
The effect of spreading gain control on a CDMA slotted ALOHA system 996
QoS-sensitive admission policy for non-real-time data packets in voice/data integrated CDMA systems 1419
CDN
Hierarchy-aware algorithms for CDN proxy placement in the Internet 251
Cell assignment
Evolutionary approach to optimize the assignment of cells to switches in personal communication networks 927
Assigning cells to switches in cellular mobile networks: a comparative study 950
Cell bounce effects
Proactive seamless mobility management for future IP radio access networks 1975
Cell cluster
Call admission control for wireless personal communications 522
Cellular mobile architecture
Challenges of computing in mobile cellular environment—a survey 2090
Cellular networks
Evolutionary approach to optimize the assignment of cells to switches in personal communication networks 927
Assigning cells to switches in cellular mobile networks: a comparative study 950
Centralized control
A dynamically adaptable polling scheme for voice support in IEEE802.11 networks 129
Certificate
Virtual certificates and synthetic certificates: new paradigms for improving public key validation 1826
Towards a framework for evaluating certificate status information mechanisms 1839
AdoCSI: towards a transparent mechanism for disseminating Certificate Status Information 1851
Certificate Revocation List
AdoCSI: towards a transfparent mechanism for disseminating Certificate Status Information 1851
Certificate revocation list
Towards a framework for evaluating certificate status information mechanisms 1839
Certificate revocation status
Towards a framework for evaluating certificate status information mechanisms 1839
Certificate revocation tree
Towards a framework for evaluating certificate status information mechanisms 1839
Certificate Revocation
AdoCSI: towards a transfparent mechanism for disseminating Certificate Status Information 1851
Certificate revocation
Towards a framework for evaluating certificate status information mechanisms 1839
Certificate Status
AdoCSI: towards a transparent mechanism for disseminating Certificate Status Information 1851
Certificate status
Towards a framework for evaluating certificate status information mechanisms 1839
Channel assignment
Challenges of computing in mobile cellular environment—a

survey 2090
Channelization code
Fast dynamic code assignment in next generation wireless access networks 1634
Real-time packet scheduling in next generation radio access system 1931
Chaotic signals
Synchronized chaos for network security 498
Charging Internet services
Coherent charging of differentiated services in the internet depending on congestion control aggressiveness 1445
Charging
A market managed multi-service Internet (M3I) 404
Client buffer
First segment partition for video-on-demand broadcasting protocols 1698
Client/server network management and control
A distributed simulator for network resource management investigation 1782
CLR approximation
Design of new real-time models for tight upper bound approximation of cell loss ratio in ATM networks 1225
Code division multiple access
Performance analysis of a modified CDMA/PRMA MAC protocol 1673
Code-tree
Fast dynamic code assignment in next generation wireless access networks 1634
Collaborative work
Trends in networked collaborative virtual environments 430
Combinatorial optimization
A genetic algorithm based approach to route selection and capacity flow assignment 961
Common Gateway Interface
Performance comparison of dynamic web platforms 888
Communication protocol testing
Context independent unique state identification sequences for testing communication protocols modelled as extended finite state machines 1622
Communication protocols
Verifying liveness properties of multifunction composite protocols 1318
Communication systems
Optimal multichannel data transmission in computer networks 759
Communication
The human perspective of the wireless world 11
Communication/information infrastructure
Development of the communication/information infrastructure at the academic institution 472
Comparison
Performance comparison of dynamic web platforms 888
Complexity
On the complexity of QoS routing 376
Compressed video
Online variable-bit-rate video traffic smoothing 639
Computer communications
Optimal multichannel data transmission in computer networks 759
Conditional firewall rules
Reactive firewalls—a new technique 1302
Confidential mail storage
Confidential mobile mail retrieval 1219
Congestion
Virtual topology reconfiguration in IP/WDM optical ring networks 91
Congestion control
Congestion control multicast in wireless ad hoc networks 278
Service differentiation and performance of weighted window-based congestion control and packet marking algorithms in ECN networks 314
The TCP control block interdependence in fixed networks—new performance results 366
A market managed multi-service Internet (M3I) 404
Adaptive CSFQ: determining the packet dropping probability adaptively for achieving fair bandwidth allocations in SCORE networks 579
Coherent charging of differentiated services in the internet depending on congestion control aggressiveness 1445
Congestion control, differentiated services, and efficient capacity management through a novel pricing strategy1457
TCP with sender-based delay control 1614
Congestion pricing
Distributed dynamic capacity contracting: an overlay congestion pricing framework 1484
Congestion signals
Incentive mechanisms for smoothing out a focused demand for network resources 237
Connection admission control
Connection admission control in UMTS radio access networks 2011
Connectivity
The role and strategy of an ARNet in a developing country 460
Constrained online multicast
The effect of spreading gain control on a CDMA slotted ALOHA system* 996
Constrained online multicast
A case for tree migration and integrated tree maintenance in QoS multicasting 1007
Consulting
The role and strategy of an ARNet in a developing country 460
Content
The role and strategy of an ARNet in a developing country 460
Context
Activities, context and ubiquitous computing 1168
Context transfer
Proactive seamless mobility management for future IP radio access networks 1975
Context-awareness
Activities, context and ubiquitous computing 1168
Genie of the net, an agent platform for managing services on behalf of the user 1188
Converter placement
On the optimal placement of wavelength converters in

WDM networks 986
Optimal wavelength converter placement in arbitrary topology wavelength-routed networks 975
Core-stateless resource provisioning
On call admission control for IP telephony in best effort networks 304
Courses
CARNet: educated users for effective utilisation of information technology 481
Cryptography
Lightweight security for mobile commerce transactions 2052

Data access
Challenges of computing in mobile cellular environment—a survey 2090
Datagram Caching
Implications of proactive datagram caching on TCP performance in wireless/mobile communications 79
Data communication
Ultra-wideband radio technology: overview and future research 46
A market managed multi-service Internet (M3I) 404
Data resources
A delay optimal algorithm to locate and migrate data resources in broadband networks 103
Decryption
Synchronized chaos for network security 498
Delay-constrained path selection
Algorithms and protocols for stateless constrained-based routing 1570
Demand routing protocol
Selecting a routing strategy for your ad hoc network 723
Dialogue management
Homer II—man–machine interface to internet for blind and visually impaired people 438
Differential global positioning system
Philosophies and technologies for ambient aware devices in wearable computing grids 1145
Differentiated services
The two markers system for TCP and UDP flows in a differentiated services network 338
End-to-end QoS routing framework for differentiated services networks 566
Provisioning of Qos enabled inter-domain services 1070
ItswTCM: a new aggregate marker to improve fairness in DiffServ 1018
Congestion control, differentiated services, and efficient capacity management through a novel pricing strategy 1457
On end-to-end analysis of packet loss 1693
Differentiated Services
Quality of service provisioning through traffic engineering with applicability to IP-based production networks 845
Differentiated-services
Distributed dynamic capacity contracting: an overlay congestion pricing framework 1484
DiffServ
A new traffic engineering manager for DiffServ/MPLS networks: design and implementation on an IP QoS Testbed 388
A service model for guaranteeing packet loss bounds in differentiated services architectures 1083
Supporting Quality of Service in IP multicast networks 1533
Diffusion approximation
A measurement-based call admission control scheme for ATM networks based on the diffusion approximation 622
Digital signatures
Experiences of using a PKI to access a hospital information system by high street opticians 1893
Digital subscriber lines
Operation management of IP broadband access networks 679
Disconnection
Freeze TCP with timestamps for fast packet loss recovery after disconnections 1792
Discrete capacity allocation
Discrete capacity and flow assignment algorithms with performance guarantee 1056
Distance learning
Advanced solutions for distance learning via satellite 423
Distributed Dynamic Capacity Contracting
Distributed dynamic capacity contracting: an overlay congestion pricing framework 1484
Distributed simulation
A distributed simulator for network resource management investigation 1782
Distributed Steiner algorithms
Distributed multicase tree generation with dynamic group membership 1105
Dynamic
Performance comparison of dynamic web platforms 888
Predictive and measurement-based dynamic resource management and QoS control for videos 1651
Dynamic code assignment
Fast dynamic code assignment in next generation wireless access networks 1634
Real-time packet scheduling in next generation radio access system 1931
Dynamic multicast groups
Distributed multicase tree generation with dynamic group membership 1105
Dynamic predictive weighted fair queueing
On the dynamic allocation of resources using linear prediction of aggregate network traffic 1341
Dynamic programming
Hierarchical Reliable Multicast: Performance Analysis and Optimal Placement of Proxies 2070
Dynamic resource management
DRA: a new buffer management scheme for wireless atm networks using aggregative large deviation principle 708
Dynamic routing
Exploiting the temporal dimension in QoS-aware multicast routing 1274

Early-deadline-first
Real-time packet scheduling in next generation radio access system 1931
Education
CARNet: educated users for effective utilisation of information technology 481

The role and strategy of an ARNet in a developing country 460
Effective bandwidth
A measurement-based call admission control scheme for ATM networks based on the diffusion approximation 622
e-Government
Security requirements for e-government services: a methodological approach for developing a common PKI-based security policy 1873
e-Health
Using a privilege management infrastructure for secure web-based e-health applications 1863
Electronic banking
A framework for the design of bank communications systems 1775
Electronic commerce
Lightweight security for mobile commerce transactions 2052
Emulation environment
Practical QoS network system with fault tolerance 1764
Encoding
Non-blocking OVSF codes and enhancing network capacity for 3G wireless and beyond systems 1907
Encryption
Synchronized chaos for network security 498
Experiences of using a PKI to access a hospital information system by high street opticians 1893
End-to-end delay
Optimal multichannel data transmission in computer networks 759
End-to-end delays
NetLets: measurement-based routing daemons for low end-to-end delays over networks 834
End-to-end measurements
On call admission control for IP telephony in best effort networks 304
End-to-end path delay
End-to-end QoS routing framework for differentiated services networks 566
End-to-end QoS
Provisioning of Qos enabled inter-domain services 1070
End-to-end TCP enhancements
Freeze TCP with timestamps for fast packet loss recovery after disconnections 1792
energy savings
Exploiting the adaptive properties of a probing device for TCP in heterogenous networks 177
Energy scavenging
A study of low level vibrations as a power source for wireless sensor nodes 1131
Engset model
A new method for analyzing feedback-based protocols with applications to engineering Web traffic over the Internet 785
Enhance network scalability
Performance evaluation of QoS-routing methods for IP-based multiservice networks 817
Ethernet
Operation management of IP broadband access networks 679
DP-Ethernet: the Profibus DP protocol implemented on Ethernet 1095
Evaluation framework
Towards a framework for evaluating certificate status information mechanisms 1839
Exhaustion/coverage testing
A scalable tool for efficient protocol validation and testing 766
Explicit congestion notification
Service differentiation and performance of weighted window-based congestion control and packet marking algorithms in ECN networks 314
TCP with sender-based delay control 1614
Extended finite state machine model
Context independent unique state identification sequences for testing communication protocols modelled as extended finite state machines 1622

Failure detection
An architecture for highly available wide-area service composition 1727
Fair bandwidth allocation
Adaptive CSFQ: determining the packet dropping probability adaptively for achieving fair bandwidth allocations in SCORE networks 579
Fair packet queueing algorithm
The issue of useless packet transmission for multimedia over the Internet 1240
Fair queuing
Adaptive CSFQ: determining the packet dropping probability adaptively for achieving fair bandwidth allocations in SCORE networks 579
Delay and data rate decoupled fair queueing for multimedia services in wireless networks 1944
Fairness
The two markers system for TCP and UDP flows in a differentiated services network 338
Family calendar
Genie of the net, an agent platform for managing services on behalf of the user 1188
Fast forwarding-table construction algorithm
High-performance IP forwarding with efficient routing-table update 1683
FastCGI
Performance comparison of dynamic web platforms 888
Fast updates
A pipelined routing lookup scheme with fast updates 1594
Fault recovery
Prioritized traffic restoration in connection oriented QoS based networks 2025
Fault tolerance
Practical QoS network system with fault tolerance 1764
Firewall architecture
Reactive firewalls—a new technique 1302
Flow control
The TCP control block interdependence in fixed networks—new performance results 366
A proposal of new price-based Call Admission Control rules for Guaranteed Performance services multiplexed with Best Effort traffic 1470

A modification of TCP flow control for improving end-to-end TCP performance over networks with wireless links 1998
Flow routing
Profile-based routing and traffic engineering 351
Fluid-flow model
Fluid-flow modelling of internet traffic in GSM/GPRS networks 1756
Fluid traffic models
On the effectiveness of the many-sources asymptotic for admission control 1376
Focused loading
Incentive mechanisms for smoothing out a focused demand for network resources 237
Forward planning conflict-free
The impact of bursty traffic on FPCF packet switch performance 513
Forwarding engine
A pipelined routing lookup scheme with fast updates 1594
Four-wave mixing
Optical nonlinear effects on the performance of IP traffic over GMPLS-based DWDM networks 1330
Fractional stable noise
On the dynamic allocation of resources using linear prediction of aggregate network traffic 1341
Free spectral range
Wavelength assignment to minimize requirement on tunable range of optical transceivers in WDM networks 774
Future mobile radio systems
The Wireless World Research Forum—WWRF 2
Fuzzy logic
A QoS-aware policer for a fair resource sharing in wireless ATM 1392
Fuzzy set
A fuzzy genetic algorithm for QoS multicast routing 506

3GB
Service architectures for the wireless world 19
3G services
Challenges of computing in mobile cellular environment—a survey 2090
game-theoretic analysis of networks
Incentive mechanisms for smoothing out a focused demand for network resources 237
General packet radio service
Fluid-flow modelling of internet traffic in GSM/GPRS networks 1756
Generalized multiprotocol label switching
Virtual topology reconfiguration in IP/WDM optical ring networks 91
Optical nonlinear effects on the performance of IP traffic over GMPLS-based DWDM networks 1330
Generalized processor sharing
Call admission control in generalized processor sharing schedulers with tight deterministic delay bounds 65
Genetic algorithm
A fuzzy genetic algorithm for QoS multicast routing 506
Genetic algorithms
Design and control of the interconnecting network of the access segment of mobile communications systems 489
Evolutionary approach to optimize the assignment of cells to switches in personal communication networks 927
Assigning cells to switches in cellular mobile networks: a comparative study 950
A genetic algorithm based approach to route selection and capacity flow assignment 961
Gigabit
The Italian academic network GARR: evolution in the Gigabit era 477
Global tree maintainance
A case for tree migration and integrated tree maintenance in QoS multicasting 1007
GLSP
Lambda GLSP setup with QoS requirements in optical Internet 603
Goodputs
A new method for analyzing feedback-based protocols with applications to engineering Web traffic over the Internet 785
Government Public Key Infrastructure
The GPKI developing status of Taiwan and some major Asia countries 1884
Guaranteed Performance services
A proposal of new price-based Call Admission Control rules for Guaranteed Performance services multiplexed with Best Effort traffic 1470

Handoff care-of address
Proactive seamless mobility management for future IP radio access networks 1975
Handoff interarrival times
Performance modeling of wireless networks with generally distributed handoff interarrival times 1747
Heavy tail
Observed performance of elastic Internet applications 914
Heterogeneous environments
Mobile users in heterogeneous environments with middleware platform 700
Heterogeneous networks
Software radio and reconfiguration management 26
Exploiting the adaptive properties of a probing device for TCP in heterogenous networks 177
Heuristic algorithm
On anycast routing with bandwidth constraint 1541
Heuristics
Assigning cells to switches in cellular mobile networks: a comparative study 950
Hierarchical location database
Dynamic location strategy for hot mobile subscribers in personal communications 1353
Hierarchy
Hierarchical Reliable Multicast: Performance Analysis and Optimal Placement of Proxies 2070
High availability
A framework for the design of bank communications systems 1775
Home Location Register
Optimal location management for two-tier PCS networks 1047

Home network
A simulation study of TCP performance over IEEE 1394 home networks 670
Hopcount
On the complexity of QoS routing 376
HTTP
Evaluating web user perceived latency using server side measurements 872
Observed performance of elastic Internet applications 914

I-Centric Communication
Service architectures for the wireless world 19
Idle order set
VIRUS: a pseudo-framing method for cell-based interfaces 165
Idle timeslot
Performance evaluation of a new multiaccess protocol for local area networks 1800
IEEE 802.11
IP QoS support in IEEE 802.11b WLANs 1918
IEEE802.11
A dynamically adaptable polling scheme for voice support in IEEE802.11 networks 129
IEEE 1394
A simulation study of TCP performance over IEEE 1394 home networks 670
In-band signaling
On the use of out-of-band signaling in ad hoc wireless networks 1405
incentive mechanisms
Incentive mechanisms for smoothing out a focused demand for network resources 237
Informatics
Collaboration between academia and industry: telecommunications and informatics at the University of Zagreb 451
Information and communication technology
Collaboration between academia and industry: telecommunications and informatics at the University of Zagreb 451
Information technology
CARNet: educated users for effective utilisation of information technology 481
The role and strategy of an ARNet in a developing country 460
Infrared
Study and simulation of the infrared WLAN IrDA: an alternative to the radio 1210
Integer linear programming
Performance evaluation of multirate time division multiplexed wavelength routed optical networks 1644
Interaction
The human perspective of the wireless world 11
Inter-domain management
Provisioning of Qos enabled inter-domain services 1070
Inter-domain routing
Accounting and pricing: a forecast of the scenario of the next generation Internet 2037
Internet
A market managed multi-service Internet (M3I) 404
Academic and research network of Slovenia 444
Call admission control for wireless personal communications 522
Mobile and wireless Internet access 734
Observed performance of elastic Internet applications 914
The issue of useless packet transmission for multimedia over the Internet 1240
A novel dynamic cache size adjustment approach for better data retrieval performance over the internet 1710
ACES: An efficient admission control scheme for QoS-aware web servers 1581
Internet economics
Congestion control, differentiated services, and efficient capacity management through a novel pricing strategy 1457
Internet interface
Homer II—man–machine interface to internet for blind and visually impaired people 438
Internet protocol version 6
High-performance IP forwarding with efficient routing-table update 1681
Internet QoS
Coherent charging of differentiated services in the internet depending on congestion control aggressiveness 1445
Internet Routing
Hierarchy-aware algorithms for CDN proxy placement in the Internet 251
Internet Server Provider
Charging support for ad hoc stub networks 1504
IntServ
Supporting Quality of Service in IP multicast networks 1533
IP
Optical nonlinear effects on the performance of IP traffic over GMPLS-based DWDM networks 1330
IP QoS support in IEEE 802.11b WLANs 1918
Accounting and pricing: a forecast of the scenario of the next generation Internet 2037
IP multicasting
QMBF: a QoS-aware multicast routing protocol 611
IP Quality of Service
A proposal of new price-based Call Admission Control rules for Guaranteed Performance services multiplexed with Best Effort traffic 1470
IP route lookup
A pipelined routing lookup scheme with fast updates 1594
IP Security
Performance analysis of secure session initiation protocol based VoIP networks 552
IP telephony
On call admission control for IP telephony in best effort networks 304
Iptables
Reactive firewalls—a new technique 1302
IrDA
Study and simulation of the infrared WLAN IrDA: an alternative to the radio 1210

Java Server Pages
Performance comparison of dynamic web platforms 888
Java
Performance comparison of dynamic web platforms 888
Jitter concealment
An analytical design of optimal playout schedulers for packet video receivers 294

Label switching
Profile-based routing and traffic engineering 351
Large deviation principle
DRA: a new buffer management scheme for wireless atm networks using aggregative large deviation principle 708
Latency
Observed performance of elastic Internet applications 914
Leaky bucket
End-to-end QoS routing framework for differentiated services networks 566
Learning automata
Performance evaluation of a new multiaccess protocol for local area networks 1800
Least cost routing
On the complexity of "Preferred link based delay-constrained least cost routing in wide area networks" 1029
Link-state routing
Tree-based link-state routing in the presence of routing information corruption 691
Liveness properties
Verifying liveness properties of multifunction composite protocols 1318
Load balancing
Load-aware destination-controlled routing for MANETs 1551
Local measuring
Evaluating web user perceived latency using server side measurements 872
Local network cell
QMBF: a QoS-aware multicast routing protocol 611
Location awareness
Reduction of the broadcast redundancy by location awareness in mobile ad hoc networks 2082
Location management
Optimal location management for two-tier PCS networks 1047
A Stop-or-Move Mobility model for PCS networks and its location-tracking strategies 1288
Dynamic location strategy for hot mobile subscribers in personal communications 1353
Location Problems
Hierarchical Reliable Multicast: Performance Analysis and Optimal Placement of Proxies 2070
Location update
A Stop-or-Move Mobility model for PCS networks and its location-tracking strategies 1288
Challenges of computing in mobile cellular environment—a survey 2090
Long-range dependence
Pragmatic modeling of broadband access traffic 804
TCP's role in the propagation of self-similarity in the Internet 899
Lower bound
On anycast routing with bandwidth constraint 1541

Many sources asymptotic
On the effectiveness of the many-sources asymptotic for admission control 1376
Market flexibility
Accounting and pricing: a forecast of the scenario of the next generation Internet 2037
Market power
Resource reservation with a market-based protocol: what prices to expect? 1434
Markov chains
A bandwidth allocation model for a two-pass RSVP setup mechanism 1662
Markov regenerative process
Performance modeling of wireless networks with generally distributed handoff interarrival times 1747
Measurement-based call admission control
A measurement-based call admission control scheme for ATM networks based on the diffusion approximation 622
Medical telematics
Experiences of using a PKI to access a hospital information system by high street opticians 1893
Medium access control
Optimizing the packet forwarding throughput of multi-hop wireless chain networks 1515
Performance analysis of a modified CDMA/PRMA MAC protocol 1673
Medium access control protocol
Dynamic real-time channel establishment in multiple access bus networks 113
Memetic algorithms
Evolutionary approach to optimize the assignment of cells to switches in personal communication networks 927
Message scheduling
Dynamic real-time channel establishment in multiple access bus networks 113
Middleware platform
Mobile users in heterogeneous environments with middleware platform 700
Migration
A delay optimal algorithm to locate and migrate data resources in broadband networks 103
Evolutionary approach to optimize the assignment of cells to switches in personal communication networks 927
Minimum bandwidth
Wavelength assignment to minimize requirement on tunable range of optical transceivers in WDM networks 774
Minimum vertex cover
Optimal placement of wavelength converters in trees, tree-connected rings, and tree of rings 718
Mobile
Performance evaluation of wireless TCP with rerouting in mobile networks 542
A timer-based mobile multicast routing protocol in mobile networks 1965
Mobile ad hoc network
Reduction of the broadcast redundancy by location

awareness in mobile ad hoc networks 2082
Mobile ad hoc networking (MANET)
Modeling and simulation of IEEE 802.11 WLAN mobile ad hoc networks using topology broadcast reverse-path forwarding (TBRPF) 1741
Mobile computing
Mobile users in heterogeneous environments with middleware platform 700
A Stop-or-Move Mobility model for PCS networks and its location-tracking strategies 1288
Lightweight security for mobile commerce transactions 2052
Mobile mail
Confidential mobile mail retrieval 1219
Mobile networks
Distributed multicase tree generation with dynamic group membership 1105
Adaptive call admission control for QoS provisioning in multimedia wireless networks 1560
Mobile switching centre
Challenges of computing in mobile cellular environment—a survey 2090
Mobility neighbourhood
Proactive seamless mobility management for future IP radio access networks 1975
Mobility
Mobile and wireless Internet access 734
Freeze TCP with timestamps for fast packet loss recovery after disconnections 1792
Mobility support in hybrid wireless/IP networking 1990
MoD
The implementation of broadband network technologies in CARNet 465
Modeling and simulation
Modeling and simulation of IEEE 802.11 WLAN mobile ad hoc networks using topology broadcast reverse-path forwarding (TBRPF) 1741
Modelisation
Study and simulation of the infrared WLAN IrDA: an alternative to the radio 1210
MPEG-2
The issue of useless packet transmission for multimedia over the Internet 1240
MPLS

Supporting Quality of Service in IP multicast networks 1533
Multicast
Congestion control multicast in wireless ad hoc networks 278
The implementation of broadband network technologies in CARNet 465
A framework for allocating clients to rate-constrained multicast servers 1255
Exploiting the temporal dimension in QoS-aware multicast routing 1274
Supporting Quality of Service in IP multicast networks 1533
A timer-based mobile multicast routing protocol in mobile networks 1965
Proactive seamless mobility management for future IP radio access networks 1975
Multicast protocols
Distributed multicast tree generation with dynamic group membership 1105
Multicast routing
A survey of optical multicast over WDM networks 193
QoS-guaranteed one-to-many and many-to-many multicast routing 652
Multi-cell
Optimal setup of interference threshold in a multi-cell WCDMA environment 1415
Multichannel routing
Optimal multichannel data transmission in computer networks 759
Multihop systems
On the optimal placement of wavelength converters in WDM networks 986
Multimedia
Optimal setup of interference threshold in a multi-cell WCDMA environment 1415
Multimedia over IP
The issue of useless packet transmission for multimedia over the Internet 1240
Multimedia services
Delay and data rate decoupled fair queueing for multimedia services in wireless networks 1944
Multimedia traffic
Call admission control for wireless personal communications 522
Multiple access network
Dynamic real-time channel establishment in multiple access bus networks 113
Multiple paths
Practical QoS network system with fault tolerance 1764
Multiple-input–multiple-output systems
Smart antennas for wireless communications beyond the third generation 41
Multiplexed sources
Statistical transmission delay guarantee for nonreal-time traffic multiplexed with real-time traffic 1365
Multi-population algorithm
Evolutionary approach to optimize the assignment of cells to switches in personal communication networks 927
Multi-protocol label-switched
Profile-based routing and traffic engineering 351
Multi-Protocol Label Switching
A distributed simulator for network resource management investigation 1782
MultiProtocol Label Switching
A new traffic engineering manager for DiffServ/MPLS networks: design and implementation on an IP QoS Testbed 388

Neon digipainting
Genie of the net, an agent platform for managing services on behalf of the user 1188
NetLets
NetLets: measurement-based routing daemons for low end-to-end delays over networks 834

network capacity
Dynamic class selection and class provisioning in proportional differentiated services 204
Network community
Shine: a peer-to-peer based framework of network community support systems 1199
Network design problems
A genetic algorithm based approach to route selection and capacity flow assignment 961
Network emulation
An architecture for highly available wide-area service composition 1727
Network Emulation
Towards scalable network emulation 264
Network information reuse

Network measurement
On comparing the real and probed packet drop rates of a bottleneck router: the TCP traffic case 591
Addressing the requirements of QoS management for wireless ad hoc networks 1263
Network monitoring
On detecting service violations and bandwidth theft in QoS network domains 861
network pricing
Dynamic class selection and class provisioning in proportional differentiated services 204
Network security
Synchronized chaos for network security 498
On detecting service violations and bandwidth theft in QoS network domains 861
Reactive firewalls—a new technique 1302
Network simulation
On the effectiveness of the many-sources asymptotic for admission control 1376
Network tomography
Using Bayesian network on network tomography 155
On detecting service violations and bandwidth theft in QoS network domains 861
Network
Collaboration between academia and industry: telecommunications and informatics at the University of Zagreb 451
The Italian academic network GARR: evolution in the Gigabit era 477
A timer-based mobile multicast routing protocol in mobile networks 1965
Networked collaborative virtual environments
Trends in networked collaborative virtual environments 430
Networks
A market managed multi-service Internet (M3I) 404
Low cost pre-stored video transmission across networks 2061
Non-blocking
Non-blocking OVSF codes and enhancing network capacity for 3G wireless and beyond systems 1907
Nonconvex multicommodity flow problem
Discrete capacity and flow assignment algorithms with performance guarantee 1056
NP-completeness
On anycast routing with bandwidth constraint 1541

On-demand routing
Congestion control multicast in wireless ad hoc networks 278
Online smoothing
Online variable-bit-rate video traffic smoothing 639
ON/OFF source model
Fluid-flow modelling of internet traffic in GSM/GPRS networks 1756
OPNET
Study and simulation of the infrared WLAN IrDA: an alternative to the radio 1210
Optical burst switching
Optical burst switching protocols for supporting QoS and adaptive routing 1804
optical components
A survey of optical multicast over WDM networks 193
Optical Internet
Lambda GLSP setup with QoS requirements in optical Internet 603
Optical multicast
A survey of optical multicast over WDM networks 193
Optical networks
Optical burst switching protocols for supporting QoS and adaptive routing 1804
Optical packet switching
Optical burst switching protocols for supporting QoS and adaptive routing 1804
Optimal
A novel dynamic cache size adjustment approach for better data retrieval performance over the internet 1709
Optimal aggregate-flow scheduling
Performance evaluation of optimal aggregate-flow scheduling: a simulation study 222
Optimal per-hop control
Performance evaluation of optimal aggregate-flow scheduling: a simulation study 222
Optimization
Assigning cells to switches in cellular mobile networks: a comparative study 950
Hierarchical Reliable Multicast: Performance Analysis and Optimal Placement of Proxies 2070
Orthogonal variable spreading factor
Non-blocking OVSF codes and enhancing network capacity for 3G wireless and beyond systems 1907
Out-of-band signaling
On the use of out-of-band signaling in ad hoc wireless networks 1405
Overlay networks
An architecture for highly available wide-area service composition 1727

Packet dropping probability
Adaptive CSFQ: determining the packet dropping probability adaptively for achieving fair bandwidth

allocations in SCORE networks 579
Packet filter
Reactive firewalls—a new technique 1302
Packet loss
On end-to-end analysis of packet loss 1693
Packet reservation multiple access
Performance analysis of a modified CDMA/PRMA MAC protocol 1673
Packet scheduling
Dynamic class selection and class provisioning in proportional differentiated services 203
Packet switch
The impact of bursty traffic on FPCF packet switch performance 513
Packet trace
Observed performance of elastic Internet applications 914
Packet video receiver
An analytical design of optimal playout schedulers for packet video receivers 294
Paging
A Stop-or-Move Mobility model for PCS networks and its location-tracking strategies 1288
Parallel computing
Towards scalable network emulation 264
Parallel connections
Observed performance of elastic Internet applications 914
Pareto distribution
A new method for analyzing feedback-based protocols with applications to engineering Web traffic over the Internet 785
PARSEC
Selecting a routing strategy for your ad hoc network 723
Path caching
Exploiting the temporal dimension in QoS-aware multicast routing 1274
Path discovery
Load-aware destination-controlled routing for MANETs 1551
Path maintenance
Load-aware destination-controlled routing for MANETs 1551
Path Prediction Algorithm
Implications of proactive datagram caching on TCP performance in wireless/mobile communications 79
PDP roaming state
Proactive seamless mobility management for future IP radio access networks 1975
Peer-to-peer
Shine: a peer-to-peer based framework of network community support systems 1199
Peer-to-peer networks
Cost-effective broadcast for fully decentralized peer-to-peer networks 1159
Perceived user latency
Evaluating web user perceived latency using server side measurements 872
Performance
Performance comparison of dynamic web platforms 888
Low cost pre-stored video transmission across networks 2061
Performance analysis
The impact of bursty traffic on FPCF packet switch performance 513
Performance evaluation of QoS-routing methods for IP-based multiservice networks 817
Fluid-flow modelling of internet traffic in GSM/GPRS networks 1756
Performance Analysis
Hierarchical Reliable Multicast: Performance Analysis and Optimal Placement of Proxies 2070
Performance degradation
Mobility support in hybrid wireless/IP networking 1990
Performance evaluation
Performance evaluation of optimal aggregate-flow scheduling: a simulation study 222
On comparing the real and probed packet drop rates of a bottleneck router: the TCP traffic case 591
NetLets: measurement-based routing daemons for low end-to-end delays over networks 834
Load-aware destination-controlled routing for MANETs 1551
Modeling and simulation of IEEE 802.11 WLAN mobile ad hoc networks using topology broadcast reverse-path forwarding (TBRPF) 1741
Performance recovery
Prioritized failure recovery in communication networks and its transient analysis 939
Periodic and aperiodic messages
Dynamic real-time channel establishment in multiple access bus networks 113
Personal agents
Shine: a peer-to-peer based framework of network community support systems 1199
Personal communication service
A Stop-or-Move Mobility model for PCS networks and its location-tracking strategies 1288
Dynamic location strategy for hot mobile subscribers in personal communications 1353
Personal digital assistants
Philosophies and technologies for ambient aware devices in wearable computing grids 1145
Pervasive computing
Ad hoc networking in future wireless communications 36
Piece-wise linear approximation
Design of new real-time models for tight upper bound approximation of cell loss ratio in ATM networks 1225
Pilot projects
The role and strategy of an ARNet in a developing country 460
Ping-pong effects
Proactive seamless mobility management for future IP radio access networks 1975
Policy
A market managed multi-service Internet (M3I) 404
Policy-based networking
Addressing the requirements of QoS management for wireless ad hoc networks 1263

Polynomial time algorithms
Optimal multichannel data transmission in computer networks 759
POP3
Observed performance of elastic Internet applications 914
Popularity distribution
A novel dynamic cache size adjustment approach for better data retrieval performance over the internet 1709
Popularity ratio
A novel dynamic cache size adjustment approach for better data retrieval performance over the internet 1709
Premium service
A service model for guaranteeing packet loss bounds in differentiated services architectures 1083
Preemptive partial packet discard
Application performance and service differentiation for best effort traffic in ATM networks 1031
Pricing
A market managed multi-service Internet (M3I) 404
A proposal of new price-based Call Admission Control rules for Guaranteed Performance services multiplexed with Best Effort traffic 1470
Congestion control, differentiated services, and efficient capacity management through a novel pricing strategy 1457
Accounting and pricing: a forecast of the scenario of the next generation Internet 2037
Priority
Prioritized failure recovery in communication networks and its transient analysis 939
Prioritized traffic restoration in connection oriented QoS based networks 2025
Privacy
Confidential mobile mail retrieval 1219
Privilege Management Infrastructe
Using a privilege management infrastructure for secure web-based e-health applications 1863
Proactive control
Freeze TCP with timestamps for fast packet loss recovery after disconnections 1792
Proactive mobility
Proactive seamless mobility management for future IP radio access networks 1975
Production networks
Quality of service provisioning through traffic engineering with applicability to IP-based production networks 845
Profibus DP
DP-Ethernet: the Profibus DP protocol implemented on Ethernet 1095
Profile
Profile-based routing and traffic engineering 351
Proportional Fairness
A proposal of new price-based Call Admission Control rules for Guaranteed Performance services multiplexed with Best Effort traffic 1470
Protocol
Tree-based link-state routing in the presence of routing information corruption 691
DP-Ethernet: the Profibus DP protocol implemented on Ethernet 1095
A timer-based mobile multicast routing protocol in mobile networks 1965
Protocol composition
Verifying liveness properties of multifunction composite protocols 1318
Protocol specification
A scalable tool for efficient protocol validation and testing 766
Protocols
Study and simulation of the infrared WLAN IrDA: an alternative to the radio 1210
First segment partition for video-on-demand broadcasting protocols 1698
Proxies
Hierarchical Reliable Multicast: Performance Analysis and Optimal Placement of Proxies 2070
Proxy Server
Hierarchy-aware algorithms for CDN proxy placement in the Internet 251
Public key infrastructure
Experiences of using a PKI to access a hospital information system by high street opticians 1893
Public Key Infrastructure
Security requirements for e-government services: a methodological approach for developing a common PKI-based security policy 1873

QMBF
QMBF: a QoS-aware multicast routing protocol 611
QoS
DRA: a new buffer management scheme for wireless atm networks using aggregative large deviation principle 708
Design of new real-time models for tight upper bound approximation of cell loss ratio in ATM networks 1225
ACES: An efficient admission control scheme for QoS-aware web servers 1581
Low cost pre-stored video transmission across networks 2061
QoS control
Predictive and measurement-based dynamic resource management and QoS control for videos 1651
QoS guarantee
Delay and data rate decoupled fair queueing for multimedia services in wireless networks 1944
QoS multicast routing
A fuzzy genetic algorithm for QoS multicast routing 506
QoS routing
On the complexity of QoS routing 376
End-to-end QoS routing framework for differentiated services networks 566
QoS routing
Performance evaluation of QoS-routing methods for IP-based multiservice networks 817
On the complexity of "Preferred link based delay-constrained least cost routing in wide area networks" 1029
Exploiting the temporal dimension in QoS-aware multicast routing 1274
Algorithms and protocols for stateless constrained-based routing 1570

Practical QoS network system with fault tolerance 1764
QoS-aware multicasting
QMBF: a QoS-aware multicast routing protocol 611
quality of service
Dynamic class selection and class provisioning in proportional differentiated services 204
Quality of service
A framework for providing differentiated QoS guarantees in IP-based network 327
A market managed multi-service Internet (M3I) 404
Interactive video over ATM: state of the art 747
Optimal multichannel data transmission in computer networks 759
NetLets: measurement-based routing daemons for low end-to-end delays over networks 834
Quality of service provisioning through traffic engineering with applicability to IP-based production networks 845
On detecting service violations and bandwidth theft in QoS network domains 861
Its wTCM: a new aggregate marker to improve fairness in DiffServ 1018
Addressing the requirements of QoS management for wireless ad hoc networks 1263
A QoS-aware policer for a fair resource sharing in wireless ATM 1392
Congestion control, differentiated services, and efficient capacity management through a novel pricing strategy 1457
Adaptive call admission control for QoS provisioning in multimedia wireless networks 1560
On end-to-end analysis of packet loss 1693
Performance modeling of wireless networks with generally distributed handoff interarrival times 1747
Real-time packet scheduling in next generation radio access system 1931
Accounting and pricing: a forecast of the scenario of the next generation Internet2037
Quality of Service
Supporting Quality of Service in IP multicast networks 1533
IP QoS support in IEEE 802.11b WLANs 1918
Quality of services
A bandwidth allocation model for a two-pass RSVP setup mechanism 1662
Quality-of-service
Call admission control for wireless personal communications 522
Quality-of-service
QoS-guaranteed one-to-many and many-to-many multicast routing 652
$\sum iDi/Di/1$ queues
Connection admission control in UMTS radio access networks 2011
Query processing
Challenges of computing in mobile cellular environment—a survey 2090

Radio access network
Real-time packet scheduling in next generation radio access system 1931
Radio network dimensioning
Fluid-flow modelling of internet traffic in GSM/GPRS networks 1756
Rate constraint
A framework for allocating clients to rate-constrained multicast servers 1255
Real time
DP-Ethernet: the Profibus DP protocol implemented on Ethernet 1095
Design of new real-time models for tight upper bound approximation of cell loss ratio in ATM networks 1225
Real-time channel
Dynamic real-time channel establishment in multiple access bus networks 113
Real-time scheduling
Real-time packet scheduling in next generation radio access system 1931
Real-time video
Predictive and measurement-based dynamic resource management and QoS control for videos 1651
Reconfigurability
Software radio and reconfiguration management 26
Reconfigurable communication systems
Software radio and reconfiguration management 26
Recovery
Prioritized failure recovery in communication networks and its transient analysis 939
Relative data object popularity
A novel dynamic cache size adjustment approach for better data retrieval performance over the internet 1709
Reliable Multicast
Hierarchical Reliable Multicast: Performance Analysis and Optimal Placement of Proxies 2070
Replication
A framework for allocating clients to rate-constrained multicast servers 1255
Rerouting
Performance evaluation of wireless TCP with rerouting in mobile networks 542
Research and educational networks
Academic and research network of Slovenia 444
Reservation
Adaptive call admission control for QoS provisioning in multimedia wireless networks 1560
Resource pricing
Resource reservation with a market-based protocol: what prices to expect? 1434
Restoration
Prioritized traffic restoration in connection oriented QoS based networks 2025
Retransmission timeout
TCP with sender-based delay control 1614
Ring networks
Virtual topology reconfiguration in IP/WDM optical ring networks 91
Round trip time estimate
Freeze TCP with timestamps for fast packet loss recovery after disconnections 1792
Routing
Characterizing and reducing route oscillations in the

Internet 143
Profile-based routing and traffic engineering 351
A genetic algorithm based approach to route selection and capacity flow assignment 961
Discrete capacity and flow assignment algorithms with performance guarantee 1056
On the use of out-of-band signaling in ad hoc wireless networks 1405
Load-aware destination-controlled routing for MANETs 1551
A timer-based mobile multicast routing protocol in mobile networks 1965
Route flap damping
Characterizing and reducing route oscillations in the Internet 143
Route oscillation
Characterizing and reducing route oscillations in the Internet 143
Routing neighbourhood
Proactive seamless mobility management for future IP radio access networks 1975
Routing-table
High-performance IP forwarding with efficient routing-table update 1681
RSVP
A bandwidth allocation model for a two-pass RSVP setup mechanism 162
Rumor mongering
Cost-effective broadcast for fully decentralized peer-to-peer networks 1159

Satellite based telecommunication
Advanced solutions for distance learning via satellite 423
Scalability
Towards scalable network emulation 264
Accounting and pricing: a forecast of the scenario of the next generation Internet 2037
Scheduling disciplines
IP QoS support in IEEE 802.11b WLANs 1918
SDH
The Italian academic network GARR: evolution in the Gigabit era 477
Seamlessness
Proactive seamless mobility management for future IP radio access networks 1975
Security
Performance analysis of secure session initiation protocol based VoIP networks 552
Confidential mobile mail retrieval 1219
A framework for the design of bank communications systems 1775
Security for charging
Charging support for ad hoc stub networks 1504
Security protocol performance analysis
Performance analysis of secure session initiation protocol based VoIP networks 552
Selective packet dropping policy
Application performance and service differentiation for best effort traffic in ATM networks 1031
Security requirements
Security requirements for e-government services: a methodological approach for developing a common PKI-based security policy 1873
Self-similarity
TCP's role in the propagation of self-similarity in the Internet 899
Self powered wireless sensing
A study of low level vibrations as a power source for wireless sensor nodes 1131
Semi-Markov model
Statistical transmission delay guarantee for nonreal-time traffic multiplexed with real-time traffic 1365
Separable convexification
Discrete capacity and flow assignment algorithms with performance guarantee 1056
Server selection
A framework for allocating clients to rate-constrained multicast servers 1255
Service Architecture
Service architectures for the wireless world 19
Service cluster
An architecture for highly available wide-area service composition 1727
Service composition
An architecture for highly available wide-area service composition 1727
Service description
Provisioning of Qos enabled inter-domain services 1070
Service differentiating internet servers
ACES: An efficient admission control scheme for QoS-aware web servers 1581
Service differentiation
Service differentiation and performance of weighted window-based congestion control and packet marking algorithms in ECN networks 314
Service Differentiation
Coherent charging of differentiated services in the internet depending on congestion control aggressiveness 1445
Service level agreements
On detecting service violations and bandwidth theft in QoS network domains 861
Services
The role and strategy of an ARNet in a developing country 460
Servlets
Performance comparison of dynamic web platforms 888
Session recovery
An architecture for highly available wide-area service composition 1727
SIMO routing framework
End-to-end QoS routing framework for differentiated services networks 566
Simple network management protocol
Pragmatic modeling of broadband access traffic 804
Simulated annealing
Design and control of the interconnecting network of the access segment of mobile communications systems 489
Evolutionary approach to optimize the assignment of cells to switches in personal communication networks 927
Assigning cells to switches in cellular mobile networks: a comparative study 950

Simulation
A service model for guaranteeing packet loss bounds in differentiated services architectures 1083
Study and simulation of the infrared WLAN IrDA: an alternative to the radio 1210
Low cost pre-stored video transmission across networks 2061
Skyplex
Advanced solutions for distance learning via satellite 423
Slotted ALOHA
The effect of spreading gain control on a CDMA slotted ALOHA system* 996
Smart antenna
Spectrum issues and new air interfaces 53
Smart antennas
Smart antennas for wireless communications beyond the third generation 41
Smart rooms
Activities, context and ubiquitous computing 1168
SMTP
Observed performance of elastic Internet applications 914
Soft hand-off
A modification of TCP flow control for improving end-to-end TCP performance over networks with wireless links 1998
Software architecture
Shine: a peer-to-peer based framework of network community support systems 1199
Software Defined Radio
Software radio and reconfiguration management 26
Software testing
Context independent unique state identification sequences for testing communication protocols modelled as extended finite state machines 1622
Space-time codes
Smart antennas for wireless communications beyond the third generation 41
Space-time processing
Smart antennas for wireless communications beyond the third generation 41
Spatial channel models
Smart antennas for wireless communications beyond the third generation 41
Specification
Verifying liveness properties of multifunction composite protocols 1318
Specification and Description Language
A scalable tool for efficient protocol validation and testing 766
Spectrum issues
Spectrum issues and new air interfaces 53
Speech communication
A dynamically adaptable polling scheme for voice support in IEEE802.11 networks 129
Speech recognition
Homer II—man–machine interface to internet for blind and visually impaired people 438
Spreading factor
Fast dynamic code assignment in next generation wireless access networks 1634
Spreading gain control
The effect of spreading gain control on a CDMA slotted ALOHA system* 996
α-stable long-range dependent stochastic process
On the dynamic allocation of resources using linear prediction of aggregate network traffic 1341
State identification sequences
Context independent unique state identification sequences for testing communication protocols modelled as extended finite state machines 1622
State relocation
Proactive seamless mobility management for future IP radio access networks 1975
Stateful packet filter
Reactive firewalls—a new technique 1302
Stateless core networks
Adaptive CSFQ: determining the packet dropping probability adaptively for achieving fair bandwidth allocations in SCORE networks 579
Stateless routing
Algorithms and protocols for stateless constrained-based routing 1570
Statistical inference
Using Bayesian network on network tomography 155
Stimulated Raman scattering
Optical nonlinear effects on the performance of IP traffic over GMPLS-based DWDM networks 1330
Stochastic Datagram Relocation
Implications of proactive datagram caching on TCP performance in wireless/mobile communications 79
Stochastic Petri net
Prioritized failure recovery in communication networks and its transient analysis 939
Strategy
The role and strategy of an ARNet in a developing country 460
Streaming
The implementation of broadband network technologies in CARNet 465
Streaming video
An analytical design of optimal playout schedulers for packet video receivers 294
Survivability
Prioritized traffic restoration in connection oriented QoS based networks 2025
Synchronized chaos
Synchronized choas for network security 498
System security
Lightweight security for mobile commerce transactions 2052

Tabu search
Evolutionary approach to optimize the assignment of cells to switches in personal communication networks 927
Assigning cells to switches in cellular mobile networks: a comparative study 950
TCP
Implications of proactive datagram caching on TCP performance in wireless/mobile communications 79
The two markers system for TCP and UDP flows in a differentiated services network 338

Coherent charging of differentiated services in the internet depending on congestion control aggressiveness 1445
TCP with sender-based delay control 1614
The issue of useless packet transmission for multimedia over the Internet 1240

TCP adaptivity
TCP's role in the propagation of self-similarity in the Internet 899

TCP congestion control
TCP's role in the propagation of self-similarity in the Internet 899

TCP friendliness
On call admission control for IP telephony in best effort networks 304

TCP performance
A modification of TCP flow control for improving end-to-end TCP performance over networks with wireless links 1998

TCP protocol
ItswTCM: a new aggregate marker to improve fairness in DiffServ 1018

TCP-probing
Exploiting the adaptive properties of a probing device for TCP in heterogenous networks 177

TE
Lambda GLSP setup with QoS requirements in optical Internet 603

Telecommunications
Collaboration between academia and industry: telecommunications and informatics at the University of Zagreb 451

Tentative mobility matrix
Proactive seamless mobility management for future IP radio access networks 1975

Testbed
A new traffic engineering manager for DiffServ/MPLS networks: design and implementation on an IP QoS Testbed 388

Test case generation
Context independent unique state identification sequences for testing communication protocols modelled as extended finite state machines 1622

Text-to-speech
Homer II—man–machine interface to internet for blind and visually impaired people 438

Ticket-based probing
Exploiting the temporal dimension in QoS-aware multicast routing 1274

Tight upper bound
Design of new real-time models for tight upper bound approximation of cell loss ratio in ATM networks 1225

Time complexity
QoS-guaranteed one-to-many and many-to-many multicast routing 652

Time-division multiple access
Performance evaluation of a new multiaccess protocol for local area networks 1800

Time multiplexing
Non-blocking OVSF codes and enhancing network capacity for 3G wireless and beyond systems 1907

Time slot
Performance evaluation of multirate time division multiplexed wavelength routed optical networks 1644

Timeline R&D programs
The Wireless World Research Forum—WWRF 2

Timer-based
A timer-based mobile multicast routing protocol in mobile networks 1965

Token bucket
A service model for guaranteeing packet loss bounds in differentiated services architectures 1083
Reactive firewalls—a new technique 1302

Topology broadcast based on reverse-path forwarding (TBRPF)
Modeling and simulation of IEEE 802.11 WLAN mobile ad hoc networks using topology broadcast reverse-path forwarding (TBRPF) 1741

Tourist information systems
Gulliver's Genie: a multi-agent system for ubiquitous and intelligent content delivery 1177

Traditional Markov analysis
Performance analysis of a modified CDMA/PRMA MAC protocol 1673

Traffic classes
A framework for providing differentiated QoS guarantees in IP-based network 327

Traffic engineering
On the complexity of QoS routing 376
Profile-based routing and traffic engineering 351
Quality of service provisioning through traffic engineering with applicability to IP-based production networks 845

Traffic Engineering
A new traffic engineering manager for DiffServ/MPLS networks: design and implementation on an IP QoS Testbed 388

Traffic-engineering
Operation management of IP broadband access networks 679

Traffic management
A measurement-based call admission control scheme for ATM networks based on the diffusion approximation 622
Online variable-bit-rate video traffic smoothing 639

Traffic Marker
ItswTCM: a new aggregate marker to improve fairness in DiffServ 1018

Traffic measurement
On comparing the real and probed packet drop rates of a bottleneck router: the TCP traffic case 591
Observed performance of elastic Internet applications 914

Traffic modeling
Pragmatic modeling of broadband access traffic 804

Traffic overload
Performance evaluation of QoS-routing methods for IP-based multiservice networks 817

Traffic policing
A QoS-aware policer for a fair resource sharing in wireless ATM 1392

Traffic prediction
A traffic scheduling framework in broadband wireless

access systems 1602
Predictive and measurement-based dynamic resource management and QoS control for videos 1651
Traffic prioritization
A framework for the design of bank communications systems 1775
Traffic scheduling
A traffic scheduling framework in broadband wireless access systems 1602
Training
CARNet: educated users for effective utilisation of information technology 481
Transaction processing
A delay optimal algorithm to locate and migrate data resources in broadband networks 103
Transient behavior
Prioritized failure recovery in communication networks and its transient analysis 939
Transient fluid analysis
Performance analysis of a modified CDMA/PRMA MAC protocol 1673
Transmission Control Protocol
Exploiting the adaptive properties of a probing device for TCP in heterogenous networks 177
Performance evaluation of wireless TCP with rerouting in mobile networks 542
A simulation study of TCP performance over IEEE 1394 home networks 670
Transmission control protocol
The TCP control block interdependence in fixed networks—new performance results 366
Mobility support in hybrid wireless/IP networking 1990
Transmission delay time distribution
Statistical transmission delay guarantee for nonreal-time traffic multiplexed with real-time traffic 1365
Tree migration
A case for tree migration and integrated tree maintenance in QoS multicasting 1007
Tree migration
The effect of spreading gain control on a CDMA slotted ALOHA system* 996
Tree of rings
Optimal placement of wavelength converters in trees, tree-connected rings, and tree of rings 718
Tree
Optimal placement of wavelength converters in trees, tree-connected rings, and tree of rings 718
Tree-based LSR
Tree-based link-state routing in the presence of routing information corruption 691
Tree-connected rings
Optimal placement of wavelength converters in trees, tree-connected rings, and tree of rings 718
Tunable range
Wavelength assignment to minimize requirement on tunable range of optical transceivers in WDM networks 774
Two-pass with advertising
A bandwidth allocation model for a two-pass RSVP setup mechanism 1662
Ubiquitous communications
Ad hoc networking in future wireless communications 36
Ubiquitous computing
Activities, context and ubiquitous computing 1168
Ubiquitous computing
Shine: a peer-to-peer based framework of network community support systems 1199
UDP
The two markers system for TCP and UDP flows in a differentiated services network 338
Ultra wideband
Spectrum issues and new air interfaces 53
Ultra-wideband radio technology
Ultra-wideband radio technology: overview and future research 46
UMTS
Philosophies and technologies for ambient aware devices in wearable computing grids 1145
Unspecified bit rate
Application performance and service differentiation for best effort traffic in ATM networks 1031
Usability
Experiences of using a PKI to access a hospital information system by high street opticians 1893
Users
The human perspective of the wireless world 11
UTRAN
Connection admission control in UMTS radio access networks 2011
UWB
Ultra-wideband radio technology: overview and future research 46
UWB-RT
Ultra-wideband radio technology: overview and future research 46

Validation
A scalable tool for efficient protocol validation and testing 766
Context independent unique state identification sequences for testing communication protocols modelled as extended finite state machines 1622
Validation testing
Experiences of using a PKI to access a hospital information system by high street opticians 1893
Variable bit rate
Predictive and measurement-based dynamic resource management and QoS control for videos 1651
Variable packet length
Performance evaluation of a new multiaccess protocol for local area networks 1800
Verification
Verifying liveness properties of multifunction composite protocols 1318
Context independent unique state identification sequences for testing communication protocols modelled as extended finite state machines 1622
Vibration to electricity conversion
A study of low level vibrations as a power source for wireless sensor nodes 1131

Videoconferencing
The implementation of broadband network technologies in CARNet 465
Video on demand
Interactive video over ATM: state of the art 747
Video-on-demand
Online variable-bit-rate video traffic smoothing 639
Video transmission
Low cost pre-stored video transmission across networks 2061
Virtual connection tree
Call admission control for wireless personal communications 522
Virtual output queuing
The impact of bursty traffic on FPCF packet switch performance 513
Virtual topology
Virtual topology reconfiguration in IP/WDM optical ring networks 91
VIRUS interface
VIRUS: a pseudo-framing method for cell-based interfaces 165
Visitor Location Register
Optimal location management for two-tier PCS networks 1047
VoD service
First segment partition for video-on-demand broadcasting protocols 1699
Voice over internet protocol
Performance analysis of secure session initiation protocol based VoIP networks 552
Voice/data
QoS-sensitive admission policy for non-real-time data packets in voice/data integrated CDMA systems 1419

Wavelength assignment
Wavelength assignment to minimize requirement on tunable range of optical transceivers in WDM networks 774
On the optimal placement of wavelength converters in WDM networks 986
Wavelength conversion
On the optimal placement of wavelength converters in WDM networks 986
Wavelength converter
Optimal placement of wavelength converters in trees, tree-connected rings, and tree of rings 718
Wavelength converters
Optimal wavelength converter placement in arbitrary topology wavelength-routed networks* 975
Wavelength division multiplexing
Optical nonlinear effects on the performance of IP traffic over GMPLS-based DWDM networks 1330
Wavelength division multiplexing
Virtual topology reconfiguration in IP/WDM optical ring networks 91
Wavelength routed optical network
Optimal placement of wavelength converters in trees, tree-connected rings, and tree of rings 718
Wavelength-routing
Optimal wavelength converter placement in arbitrary topology wavelength-routed networks* 975
Performance evaluation of multirate time division multiplexed wavelength routed optical networks 1644
WCDMA
Optimal setup of interference threshold in a multi-cell WCDMA environment 1415
WDM
The Italian academic network GARR: evolution in the Gigabit era 477
Wavelength assignment to minimize requirement on tunable range of optical transceivers in WDM networks 774
WDM networks
A survey of optical multicast over WDM networks 193
On the optimal placement of wavelength converters in WDM networks 986
Web
Performance comparison of dynamic web platforms 888
Web server
Evaluating web user perceived latency using server side measurements 872
Weighted fair queuing
End-to-end QoS routing framework for differentiated services networks 566
Wide area networks
On the complexity of "Preferred link based delay-constrained least cost routing in wide area networks" 1029
Wideband CDMA
Non-blocking OVSF codes and enhancing network capacity for 3G wireless and beyond systems 1907
Wired/wireless networks
Exploiting the adaptive properties of a probing device for TCP in heterogenous networks 177
Wireless ad hoc networks
Load-aware destination-controlled routing for MANETs 1551
Wireless
The human perspective of the wireless world 11
Performance evaluation of wireless TCP with rerouting in mobile networks 542
Study and simulation of the infrared WLAN IrDA: an alternative to the radio 1210
Wireless ATM
DRA: a new buffer management scheme for wireless atm networks using aggregative large deviation principle 708
A QoS-aware policer for a fair resource sharing in wireless ATM 1392
Wireless communication
A Stop-or-Move Mobility model for PCS networks and its location-tracking strategies 1288
Wireless Internet
A modification of TCP flow control for improving end-to-end TCP performance over networks with wireless links 1998
Wireless LAN
A dynamically adaptable polling scheme for voice support in IEEE802.11 networks 129
IP QoS support in IEEE 802.11b WLANs 1918
Wireless LANs
Modeling and simulation of IEEE 802.11 WLAN mobile ad

hoc networks using topology broadcast reverse-path forwarding (TBRPF) 1741
Wireless local area network
Development of the communication/information infrastructure at the academic institution 472
Wireless network
Mobile and wireless Internet access 734
Optimizing the packet forwarding throughput of multi-hop wireless chain networks 1515
Delay and data rate decoupled fair queueing for multimedia services in wireless networks 1944
Wireless networks
Ad hoc networking in future wireless communications 36
Adaptive call admission control for QoS provisioning in multimedia wireless networks 1560
Performance modeling of wireless networks with generally distributed handoff interarrival times 1747
Freeze TCP with timestamps for fast packet loss recovery after disconnections 1792
Wireless systems
Ultra-wideband radio technology: overview and future research 46
Wireless World
Service architectures for the wireless world 19
Wireless World Research Forum
The Wireless World Research Forum-WWRF 2
Smart antennas for wireless communications beyond the third generation 41
WLAN
Study and simulation of the infrared WLAN IrDA: an alternative to the radio 1210
WPAN
Study and simulation of the infrared WLAN IrDA: an alternative to the radio 1210
WWRF
Spectrum issues and new air interfaces 53
WWW
Experiences of using a PKI to access a hospital information system by high street opticians 1893
X.509
Using a privilege management infrastructure for secure web-based e-health applications 1863
xDSL
The implementation of broadband network technologies in CARNet 465
Trust
Establishing and managing trust within the public key infrastructure 1815
Security
Establishing and managing trust within the public key infrastructure 1815
Quality
Establishing and managing trust within the public key infrastructure 1815
Qualified policy
Establishing and managing trust within the public key infrastructure 1815
Trusted third party
Establishing and managing trust within the public key infrastructure 1815
Public Key Infrastructures
Virtual certificates and synthetic certificates: new paradigms for improving public key validation 1826
e-Commerce
Virtual certificates and synthetic certificates: new paradigms for improving public key validation 1826
